Advanced Foreign Exchange Risk Management Training Course

Ref: 2257_31324 **Date:** 7 – 11 June 2027 **Location:** Dubai - Five-star CBD venue **Fees:** 19500 SAR

Introduction:

The Advanced Foreign Exchange Risk Management and Treasury Operations Training Course is a one-week course for treasury risk officers, foreign exchange dealers, market risk controllers, and liquidity managers, culminating in a Treasury Foreign Exchange Exposure and Hedging Model. Unhedged currency fluctuations, volatile cross-currency commercial obligations, and deficient trade settlements expose balance sheets to severe valuation shocks and liquidity deficits. Nominees currently manage spot conversions and reconcile treasury accounts, advancing to professional hedging execution through a progressive modelling build. CoreConcept Training Center provides this Advanced Foreign Exchange Risk Management and Treasury Operations Training Course to establish resilient front-to-back treasury controls.

Course Objectives:

- Calculate spot bid-ask spreads, forward points, and interest rate parity differentials using ISO currency standards
- Structure bilateral corporate hedging transactions adhering to the six core principles of the FX Global Code
- Formulate Shariah-compliant foreign exchange forward contracts using IIFM Standard No. 12 single binding Wa'ad frameworks
- Quantify balance sheet currency exposure and value-at-risk metrics under IFSB-1 Principle 67 market risk guidelines
- Deploy automated order workflows and counterparty confirmation controls across professional dealing and trading execution systems
- Construct a functioning Treasury Foreign Exchange Exposure and Hedging Model to optimise multi-currency corporate cash flows

Target Audience:

- Corporate treasury managers responsible for overseeing cash liquidity, funding lines, and multi-currency banking relationships
- Foreign exchange dealing specialists responsible for executing spot transactions, forward contracts, and corporate currency hedges
- Financial market risk controllers responsible for measuring balance sheet exposures, sensitivity metrics, and counterparty limits
- Treasury operations supervisors responsible for governing transaction confirmations, trade settlements, and clearing reconciliations

Course Outline:

Day 1: Foreign Exchange Market Foundations and Cash Exposure Profiling

- ISO Currency Code Conventions Mapping Bid And Ask Quotations
- Big Figures And Pip Mechanics Calculating Net Exchange Margins
- Covered Interest Arbitrage Models Evaluating Forward Currency Pricing Discrepancies
- Interest Rate Parity Theorems Determining Theoretical Outright Forward Rates
- Baseline Currency Exposure Registers Profiling Transactional Balance Sheet Inflows

Day 2: Global Governance Standards and Islamic Hedging Architectures

- FX Global Code Principles Establishing Institutional Market Conduct Baselines
- IIFM Standard No 12 Structures Formulating Binding Waad Forwards
- AAOIFI Shariah Standard No 65 Rules Governing Unilateral Promises
- Sarf Juristic Principles Regulating Immediate Spot Currency Exchange Contracts
- IFSB 1 Principle 67 Standards Benchmarking Off Balance Sheet Exposure

Day 3: Treasury Hedging Operations and Systemic Trade Execution

- Outright Forward Rate Calculations Managing Fixed Payment Maturity Dates
- Foreign Exchange Swap Agreements Balancing Interbank Multi Currency Liquidity
- Bloomberg FXGO Interface Protocols Automating Execution And Counterparty Quotes
- LSEG Workspace Dealing Platforms Structuring Interbank Cross Currency Swaps
- Tahawwut Master Agreement Schedules Regulating Islamic Corporate Hedging Portfolios

Day 4: Market Risk Controls and Trade Processing Exceptions

- Value At Risk Variance Covariance Metrics Estimating Currency Losses
- SMARTS Surveillance Integration Systems Detecting Dealing Desk Irregularities
- FX Global Code Confirmation Principles Mitigating Post Trade Settlement Lags
- Counterparty Credit Limit Metrics Monitoring Interbank And Corporate Exposure
- Nostro Account Reconciliation Workflows Eliminating Overdraft Penalties And Exceptions

Day 5: Modelling Build and Exposure Hedging Construction

- Modelling Build Routines Simulating Dynamic Multi Currency Cash Inflows
- Modelling Build Algorithms Automating FX Global Code Governance Verifications
- Modelling Build Calculators Stress Testing IIFM Islamic Forward Portfolios
- Modelling Build Dashboards Monitoring Value At Risk Sensitivity Thresholds
- Treasury Foreign Exchange Exposure And Hedging Model Completing Artefact

Skills You Will Gain:

- Foreign Exchange Spot Quotation Valuation
- Interest Rate Parity Modelling
- FX Global Code Compliance Auditing
- Islamic Foreign Exchange Forward Structuring
- Cross-Currency Swap Liquidity Management
- Treasury Market Risk Sensitisation
- Front-to-Back Settlement Reconciliation

Why Attend This Course:

- Present a functioning Treasury Foreign Exchange Exposure and Hedging Model to the chief financial officer and treasury committee to institutionalise corporate risk oversight.
- Select optimal spot, outright forward, or Islamic Wa'ad derivative instruments based on evaluated parity spreads and Shariah compliance criteria.
- Prevent unhedged foreign currency translation deficits, unexpected counterparty settlement failures, and costly Nostro overdraft charges across dealing operations.
- Train dealing desk and treasury operations personnel on FX Global Code conduct rules, electronic quote execution, and automated settlement workflows.

Conclusion:

Upon concluding this course, the organisation integrates the Treasury Foreign Exchange Exposure and Hedging Model across corporate treasury and financial risk operations. The treasury committee and chief financial officer utilise this deliverable to approve corporate hedging mandates, allocate cross-currency counterparty credit lines, and authorise currency derivative contracts. Within forty-one week of initial deployment, the treasury oversight panel should review hedge effectiveness reports, confirmation logs, and realised cash-flow variances to ensure all currency exposures remain tightly controlled under international market standards and internal risk tolerance policies.

Frequently Asked Questions FAQ:

Which roles should an organisation nominate for the Advanced Foreign Exchange Risk Management and Treasury Operations Training Course?

Corporate treasury managers, foreign exchange dealers, market risk controllers, and operations settlement supervisors should attend. Nominees manage multi-currency trade cash flows, execute spot and forward hedges, evaluate foreign exchange balance sheet exposure, or reconcile interbank transaction settlements across institutional financial operations.

What should nominees already do at work before attending the Advanced Foreign Exchange Risk Management and Treasury Operations Training Course?

Nominees should already monitor operational cash flows, process standard currency conversions, and review foreign exchange bank statements. Familiarity with basic financial mathematics, treasury accounting entries, and commercial trade documentation ensures immediate progression into advanced mathematical pricing models, Islamic hedging structures, and dealing desk workflows.

What does the organisation receive when the participant returns from the Advanced Foreign Exchange Risk Management and Treasury Operations Training Course?

The organisation receives a Treasury Foreign Exchange Exposure and Hedging Model. This operational spreadsheet artefact incorporates cash-flow sensitivity calculators, forward rate pricing tools, IIFM Wa'ad structuring matrices, and value-at-risk stress metrics ready to support corporate treasury decisions and foreign exchange committee reviews.

Which standards and frameworks does the Advanced Foreign Exchange Risk Management and Treasury Operations Training Course follow?

The course follows the FX Global Code for governance and trade execution ethics, the ACI Dealing Certificate syllabus for market arithmetic, IIFM Standard No. 12 alongside AAOIFI Shariah Standard No. 65 for Islamic hedging, and IFSB-1 Principle 67 for market risk management.
